JATIN THAKUR

Senior Software Engineer | Backend & Distributed Systems | Java | Spring Boot | AWS

| thakurjatin096@gmail.com | linkedin.com/in/jatin-thakur | Delhi, India

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience designing and owning backend systems end-to-end, from architecture and API design through implementation, deployment, and production support. Deep expertise in Java, Spring Boot, Microservices, REST APIs, and distributed messaging with Kafka, backed by hands-on experience with Docker containerization, AWS cloud deployments, and CI/CD pipelines (Jenkins, GitLab). AWS Certified Solutions Architect – Associate (2026). Track record of driving large-scale technical initiatives independently, including a full database migration across multiple production applications, and of using AI-assisted development tools to improve engineering velocity. Comfortable working across the stack — backend, DevOps, and light Python/Django — and thrives in fast-moving, ownership-driven engineering environments.

TECHNICAL SKILLS

Languages & Frameworks: Java 8/11, Spring Boot, Spring MVC, Spring Security, JSP, Servlets, SOAP, JMS, REST APIs, Microservices, Multithreading, CometD, C++, Python, Django, HTML, CSS, JavaScript

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM, VPC, CloudWatch), Docker, Jenkins, GitLab CI/CD, Linux/Unix, Tomcat, WebLogic, WebSphere

Databases: MSSQL, Sybase, DB2, MySQL, SQL/NoSQL Database Design, Schema Migration, Query Optimization

Messaging & Integration: Kafka, JMS, REST/SOAP Integration, JSON Mapping, Third-party API Integration

Security & Quality: Authentication, Authorization, Data Encryption, Secure API Design, Coverity, Black Duck, Checkmarx, OWASP

Practices: System Design, Software Architecture, API Design, Algorithm Design, Code Reviews, Agile/Scrum, TDD, Production Support, Root Cause Analysis, Performance Optimization, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Senior Software Engineer — NatWest Group (Royal Bank of Scotland) *Nov 2022 – Present*

- Own end-to-end backend engineering for critical Market Risk and trade surveillance platforms, designing Java and Spring Boot microservices and RESTful APIs that power regulated US/UK employee compliance and monitoring systems at enterprise scale.
- Design and implement scalable, database-backed microservices with a focus on reliability, performance, security, and production stability — handling high-volume regulated financial data under strict SLA requirements.
- Translate business requirements into technical designs and production-ready implementations, collaborating with solution architects, product owners, QA engineers, and business analysts across the full SDLC.
- Led a large-scale database migration from Sybase to MSSQL across multiple applications, including schema redesign, data access layer refactoring, and integration with US-based application services — improving query performance and reducing maintenance overhead.
- Design, maintain, and integrate REST APIs and third-party services with robust authentication, authorization, and data encryption, ensuring compliance with financial regulatory standards and internal security policies.
- Containerize backend services using Docker and collaborate with platform teams on AWS-based deployments and container orchestration in a regulated banking environment.
- Contribute to Jenkins and GitLab CI/CD workflows, and perform production root-cause analysis, delivering permanent fixes and preventative improvements that reduce incident recurrence.
- Participate in code reviews, architecture discussions, and performance improvements, driving long-term platform maintainability and secure coding practices.

Software Engineer — Capgemini Engineering *Jun 2019 – Nov 2022*

- Designed and developed Java and Spring Boot backend applications and RESTful web services for large-scale, database-driven enterprise customer-facing systems, with an emphasis on reliability, maintainability, and performance.
- Built and enhanced backend and web functionality, integrating REST services with application components and real-time communication features using CometD.
- Upgraded and optimized Lucene-based search functionality across tickets and problem records, significantly improving search speed and usability.
- Identified and resolved security vulnerabilities using Coverity, Black Duck, and Checkmarx, hardening the codebase and ensuring compliance with enterprise security standards.
- Worked with QA, product owners, and cross-functional teams to deliver features, enhancements, and production fixes in Agile sprints.
- Participated in code reviews, technical design discussions, and customer-facing product demos showcasing newly developed backend features.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03), Amazon Web Services — Aug 2026
- Full Stack Web Developer Nanodegree, Udacity — Nov 2024

EDUCATION

B.Tech in Computer Science Engineering

Netaji Subhas University of Technology (formerly AIACTR, GGSIPU), New Delhi
